

Ideological Plasticity and Elasticity

- In ideological movement, if mapped, with some loss of precision perhaps, ~~more~~ spiralectically, the movement from one position to its next-rotation-equivalent can be seen as elastic, if viewed in the gross manner, while the general movement, regardless of cycle completion, can be viewed as plastic, viewed in both the gross and net manners.
- because elasticity denotes a return to the form from which it was altered, the only way ideological (or perhaps meta-ideological) elasticity can be ~~tracked~~/tracked is through the gross manner, seeing as there is no repetition in the net manner.
- because plasticity only requires a fleeting immediately-before memory/history, it can be tracked in either gross or net manners, seeing as no return to any previous form is necessary.
